

A scatter plot showing the distribution of 'avg_logprob' values across three conditions: 'successful' (blue dots), 'failed' (orange dots), and 'none' (green dots). The x-axis, labeled 'avg_logprob', ranges from -0.40 to -0.05. The y-axis is unlabeled. The 'failed' condition shows a wide distribution with points at both high and low 'avg_logprob' values. The 'successful' condition is clustered in the upper right quadrant, indicating higher 'avg_logprob' values. The 'none' condition is scattered throughout, with a notable cluster in the lower left quadrant.
